

# ADDING VALUE TO **YOUR** PRODUCT

YOUR EXPERT IN PREMIXES, PET FOOD AND FEED

NutraPet **Systems**  
Deutschland

# OUR MAIN SERVICES

We are a medium-sized company and produce animal feed premixes for Pet Food and Feed manufacturer throughout Europe. Together with our customers we develop and manufacture products which are tailor-made for your special needs.

Our owner-run company can react to new challenges quickly and flexible due to a lean organizational structure. Whether pilot project or industrial dimensions we offer technological support and reduce the time to market.

We are long-term success oriented. We value business relationships based on mutual respect, reliability and fairness rather than quick profit.

Our customers, suppliers and staff are our partners. The continuous improvement of the production process as well as flexible solutions for product and logistic issues are the premises to meet the challenges of the European market.

Thanks to long-term cooperation and partnerships we achieve valuable synergies for our customers.

Due to state of the art technologies such as automation we are able to demonstrate a highly effective low cost operation.

## HOW WE WORK

# OUR PRO- DUCTION

In order to be able to maintain a constantly reproducible product quality for our animal food premixes we work with highly precise mixers often found in pharmaceutical operations.

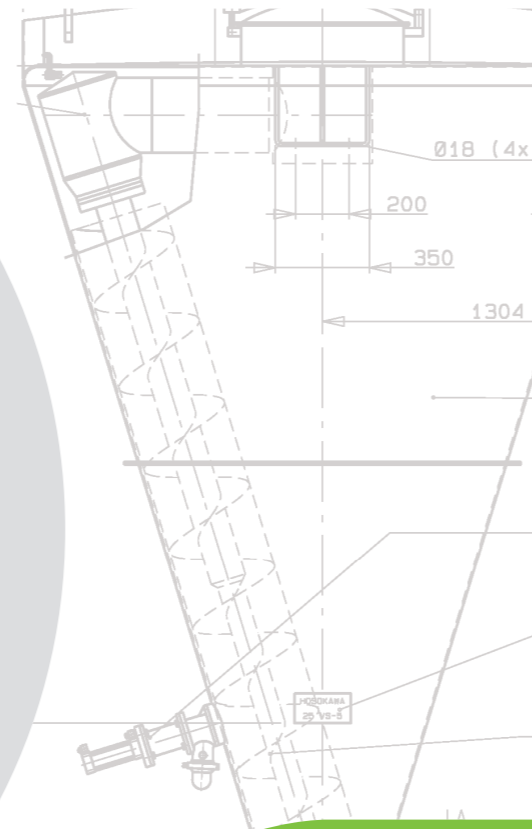

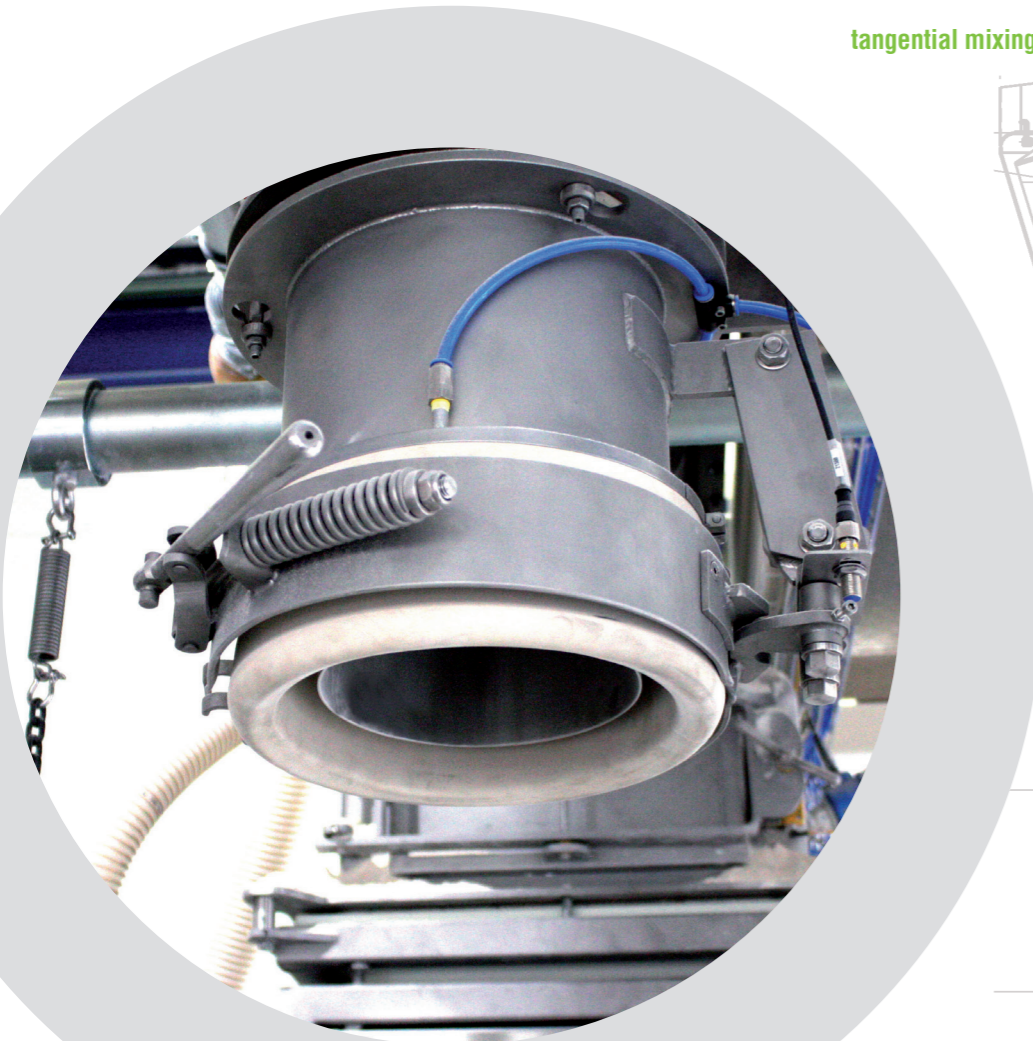

Our batch mixer produces highly accurate mix results with a precision of 1:100,000 which are checked twice a year by external institutes.

The convective mixing effect is reached by 3 factors:

axial mixing motion due to the vertical screw element

radial mixing motion due to the conical shape

tangential mixing motion due to the mixing arm

## INDIVIDUAL PACKAGING FROM 3 KG UP TO BIG BAGS

Thanks to our automatic bagging station and palletiser we are able to offer a wide variety of individual bagging units:

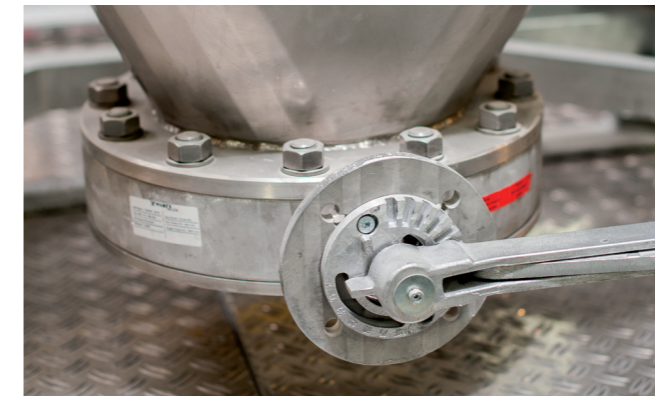

from 3 kg up to Big Bags

plastic bags or paper sacks

sewed or sealed

Passing thru a foreign object detector state of the art completes the production process on the highest possible quality level.

We guarantee a 100 % traceability due to a batch related barcode controlled product flow.

## OUR OFFER FOR YOU:

- 1 increased product safety due to a batch related, barcode controlled product flow
- 2 guaranteed quality due to a closed production process and system-supported weighing system
- 3 optimized product safety due to foreign object detector
- 4 low-dust bagging, no product spreading
- 5 short-notice delivery thanks to fast turnaround times
- 6 flexible bagging units in paper and PE bags with individual coding
- 7 100 % traceability of the finished products due to system-supported controlling

# INNOVATIVE SOLUTIONS

# OUR CORE COMPETENCES

## CORE COMPETENCES

Qualified and flexible we will produce YOUR premix on the highest level of quality and safety, tailor-made.

Concerning purchasing, manufacturing, bagging or shipping we put a significant focus on safe raw materials, production processes and delivery.

A strict raw material and quality management according to IFS and GMP+ guarantees our standards also for the custom tailor-made products of our clients.

With the expansion of our automation facilities and their constant improvement we can offer you the highest standard of product quality and safety.

Furthermore we offer you flexible bagging units in paper and PE sacks from 3 kg up to Big Bags according to your individual ideas of bagging design.

The 2016 installed Barcode-Scanner-System allows a quick, improved and safe product flow.

The continuous improvement of production processes and the enhancement of flexible solutions for the product itself and the logistic are also important aspects of the core competences of our company – it is an investment into future and into the satisfaction of our customers.

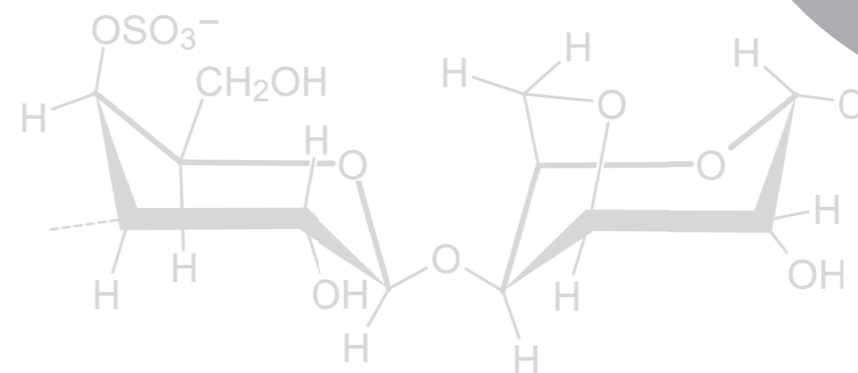

„The development of your premix is the challenge we like to take.“

## DEVELOPMENT

We are permanently looking for innovations and are always interested in testing new and high quality raw material. We pay particular attention to comprehensive control and we always strive to implement developments in our production processes.

Being able to offer FEDIAF adequate recipes we work closely together with our customers, suppliers and institutes. Together with scientists and vets we develop solutions for special application needs. In addition we pay attention to scientific studies and tests in order to evaluate the effect on animals.

**35 YEARS**  
**COMPETENCE**

IN DEVELOPING:

- ▶ pet food
- ▶ supplement feed
- ▶ care products

# OUR QUALITY

Every single member of our qualified team accepts responsibility for total Quality Management in all our operations.

Due to targeted sampling and analytical expertise in house and together with external laboratories, the quality of our raw materials and premixes is always guaranteed. We provide a complete, computerized traceability and documentation.

Together with you we develop YOUR product according to your requirements concerning functionality, guaranteed mineralization and aromatization and – if desired – addition of vitamins.

„We develop **innovative products** according to the latest scientific findings and we continuously improve existing products.“

## OUR PROMISE

In order to demonstrate complete quality assurance, all products (raw material and finished products) have to pass a laboratory control standard. The certification according to ifS food and GMP + B8 attest that NutraPet has a certified quality management system.

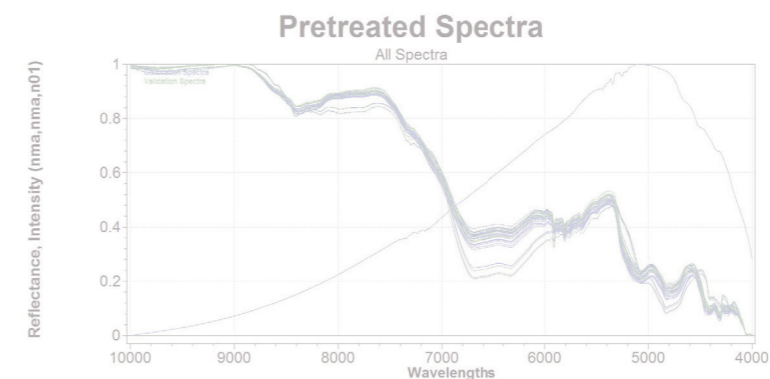

Our in-house analytics includes wet-chemical analysis, viscosity and texture measurements as well as state-of-the-art laboratory techniques like NIR stethoscopies.

With additional analysis from external laboratories we are able to support you concerning nutritional physiological issues in relation to the final feed product.

We will also be happy to provide you with information about the composition of supplement feed, dietary feed, pre- and probiotic mixtures.

„For us product quality is an investment into our and your future.“

HEALTH

## WHY?

The gastro intestinal system controls the physical and also the mental health of your pet, appr. 80 % of the immune system is located in the intestinal tract. As the intestinal flora is not inborn, it is severely attacked in times of stress or diseases, especially combined after an antibiotics treatment. In order to keep up the intestinal health it is vital that the sensible balance between appr. 85 % useful and only 15 % pathogenic micro-organisms is maintained.

**PROBIOTICS** are living bacteria strains that support the intestinal activity in a natural way. Not only that they support a treatment in cases of diarrhoea but they are also able to activate the immune system which is located in the intestinal. Thus it is likely to be highly effective in the management of infections. Probiotics should be given regularly and constantly.

## 7 reasons

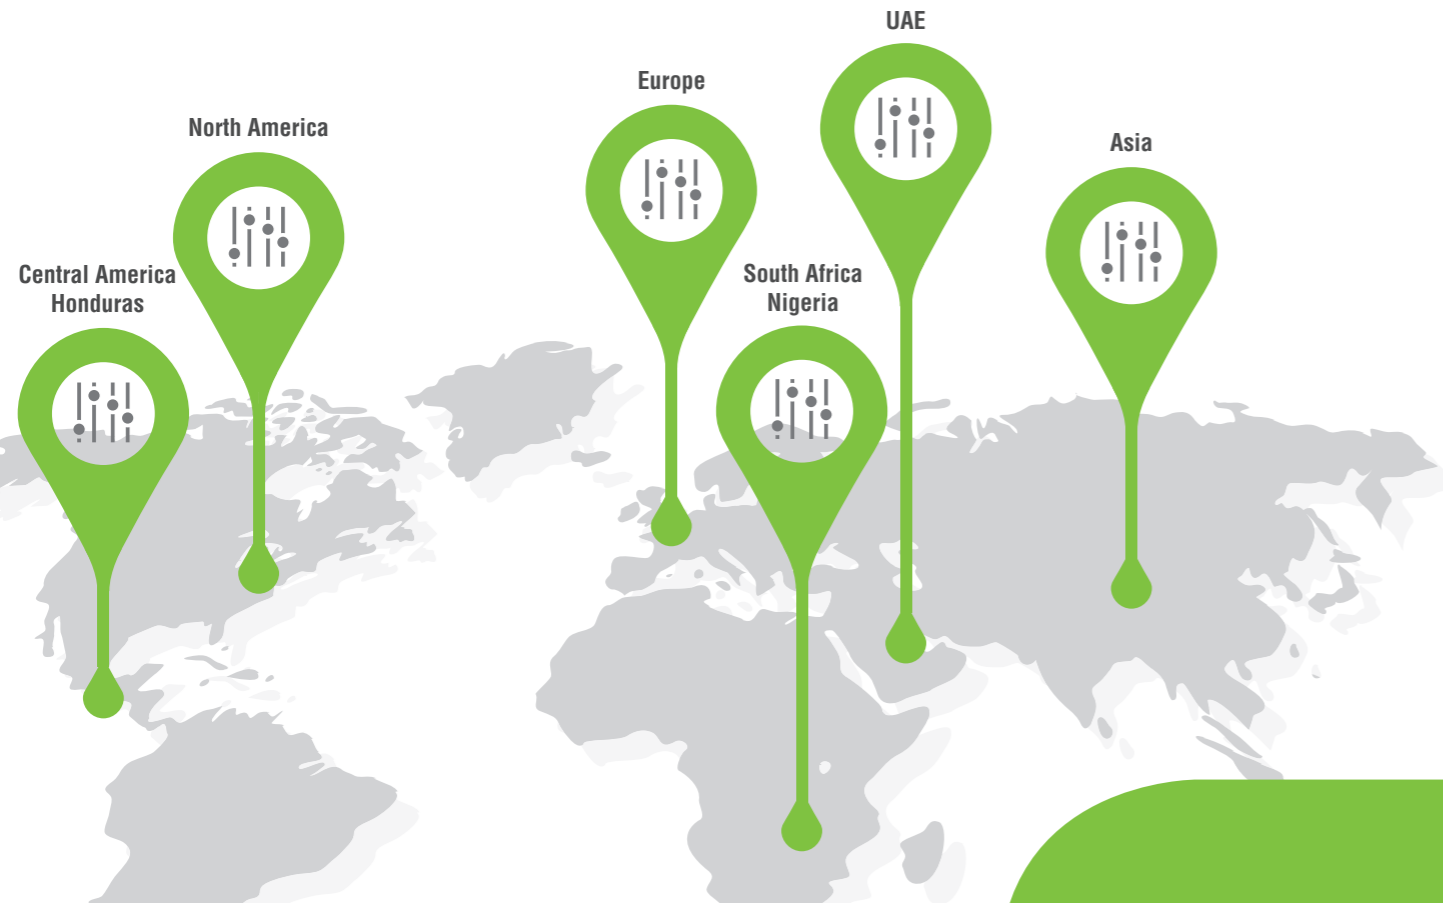

1. supporting of intestinal health and balance
2. strengthening of the immune system and the body (after surgery, at chronic diseases)
3. reducing the vulnerability to infections, allergies, skin diseases, blocks the spreading of fungal infections
4. helping in cases of food intolerance, feed is better utilised
5. balancing the intestinal health after treatment with antibiotics
6. including guaranteed quantity of living micro organisms
7. most research proven effective Direct-Fed Microbial on the market today

„All our products include a guaranteed quantity of stable and acid-resistant that reach the intestinal tract mostly unharmed. **Consequently the nutrition absorption and digestions are improved!**“

# OUR VISION

NEW FEED

CONVERGING INDUSTRIES

CUSTOMERS REQUEST

INNOVATIVE PRODUCT TRENDS

The future of feed production is depending on different aspects. The awareness of the customers and the consumers, the global development as well as new technologies will offer us a wide range of possibilities and challenges.

**NutraPet Systems** – we make visions come true.

**NutraPet Systems Deutschland GmbH** considers sustainability essential for the progress and success of the company and its employees.

We as a team adopt this guiding principle of sustainable management. It is the underlying principle for our focus on core values such as competence development, total quality management and innovation and renovation.

Our activities are based on the sensible handling of our environment. Everywhere in our company we only use probiotic cleaning agents, which are obviously advantageous in the handling of micro-biological contamination and which are sensible to use in the context of food hygiene.

Our raw materials are mainly from Europe. Thus our products are more sustainable, environmentally friendly and philanthropic.

We are aware that we have a social responsibility. We work, decide and act according to the basic ideals of human fairness.

We live sustainability:

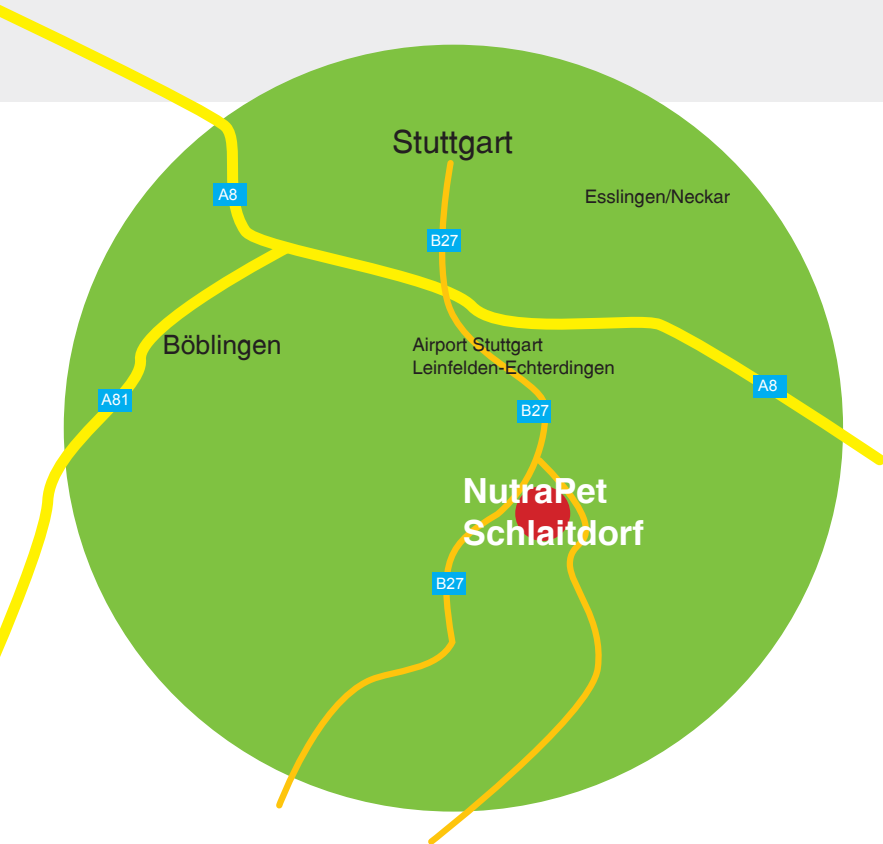

- sensible use of all kinds of raw material
- reusable packaging material
- waste separation
- converting to LED lighting
- environmentally friendly company and office material

The employees, their knowledge and experience are the most valuable asset of the company.

Due to the latest technique and automation it is possible to present an effective and energy saving working procedure in production.
